EDUCATION

Bachelor of Engineering (Electrical Engineering)

Kasetsart University
2014-2018

SKILLS

Programming Languages

- Golang
- Elixir
- Ruby
- JavaScript (Node.js, Express.js, Vue.js, Next.js)
- Solidity

Frontend Technologies

- Flutter
- Vue.js
- Next.js
- Tailwind CSS

Backend Technologies /

Frameworks

- NestJS
- Ruby on Rails
- Laravel
- Express.js
- Node.js
- Django

Content Management Systems

- WordPress

Databases / Data Stores

- PostgreSQL
- MongoDB
- Redis

DevOps / Infrastructure

- Docker
- Kubernetes
- Google Cloud Platform
- Git

Monitoring & Observability

- Prometheus
- Grafana
- Datadog
- Amplitude

Warayus Poolsaweang (Software engineer)

PROFESSIONAL SUMMARY

- Results-oriented Software Engineer with 7 years of experience in designing, developing, and maintaining high-performance applications for various industries. Proficient in a diverse technology stack—including Golang, Laravel, Vue.js, Ruby on Rails, Flutter, and Google Cloud Platform—to deliver scalable, secure solutions tailored to business needs.
- Adept at building robust backend services with Golang, creating dynamic user interfaces with Vue.js and Flutter, and leading end-to-end project delivery.
- Experienced in the healthcare domain, especially in medication ordering and inventory management systems for IPD/OPD products. Known for a strong, results-driven project management approach and a focus on delivering efficient, client-centric solutions.

WORK EXPERIENCE

Software Engineer

Aug 2024 - Present

Senestia CO., LTD

Integrated IPD & OPD Healthcare Platform

- Maintain and enhance core systems for IPD and OPD healthcare products serving a large customer base.
- Responsible for developing new features, refactoring legacy modules, and ensuring seamless performance across multiple services.
- Collaborate in cross-functional teams to ensure reliability, security, and scalability of medical record processing and medication management.
- Technologies: Golang, Flutter, NestJS, Google Cloud Platform, PostgreSQL, Redis, Microsoft SQL Server

Software Engineer

May 2021 - Aug 2024

Prodigy9 Co., Ltd.

Trip Deduction System for Sky Train

- Leading the development of a sophisticated trip deduction system for a sky train network.
- Responsible for overseeing the entire development process, from initial design to final deployment, including system architecture design and coordination with team members.
- Technologies: Golang, Svelte, Redis, PostgreSQL, Kubernetes

Digital Wallet Application

- Developed a digital wallet application for the Philippines, focusing on backend payment processing and report generation. Responsible for feature development, system maintenance, and ensuring seamless integration with payment gateways.
- Technologies: Golang, Elixir (Phoenix Framework), PostgreSQL, Redis

Crowdfunding Platform

- Created a web application that acts as an intermediary between investors and businesses. Developed key features based on user feedback and maintained system performance.
- Technologies: Laravel, Vue.js 2, Tailwind CSS

e-Wallet Platform

- Engineered a KYC document storage system with specialized data flow for file uploads. Ensured data retention and security for sensitive information, focusing on reliability through thorough testing.
- Technologies: Golang

Smart Sales Assistant Platform

- Designed a systematic data storage solution for prospective clients, automating the management of client information. Collaborated with stakeholders to align system functionalities with business objectives.
- Technologies: Next.js (Vue Framework), Tailwind CSS

Online Document Management Program for Accountants

- Developed a program for managing document calculations and issuing financial documents, streamlining processes for accounting professionals.
- Technologies: Node.js, Vue.js 2, MySQL

Software Engineer

Jun 2019 - May 2021

Gettgo

Insurance Broker

- Maintained the Gettgo website with Ruby on Rails and GraphQL.
- Designed and implemented monitoring using Prometheus and Grafana.
- Managed application infrastructure on Google Cloud Platform.
- Technologies: Ruby on Rails, GraphQL, Prometheus, Grafana, Google Cloud Platform

Software Engineer

Apr 2018 - Jun 2019

Onespace

Blockchain on Cloud

- Developed and deployed blockchain solutions on cloud infrastructure.
- Utilized Laravel for backend development and Solidity for smart contract implementation.
- Technologies: Laravel, Solidity
